

FIREPLACES

The cleaner way to keep cozy. With propane, you get a toasty fire at the flip of a switch. The heat is warmer than that from wood-burning fireplaces, too. Plus, no ash or soot to clean up afterward, and no firewood to store.

WATER HEATERS

Switch out your electric or heating oil storage tank water heater for a propane model, and you could save up to 16 percent on your energy bills. Want hot water on demand, and a lot of it? Go for a propane tankless model, a small unit that hangs on the wall and can supply hot water for multiple uses simultaneously.

RANGES AND OVENS

Your kitchen is the spot where everyone gathers. Give it the upgrade you want with propane appliances. Many homeowners choose gas cooking appliances for unique features like precise temperature control and instant-on burners. Even if you're short on space, you can opt for a range that combines a cooktop and oven for high performance in a compact size.

OUTDOOR AMENITIES

Don't stop at the propane grill. Complete your dream patio with propane fire pits, heaters, and lighting. And if you've got a pool, propane can power the heater for it, too. There's no reason that fun has to end when the sun goes down.

CLOTHES DRYERS

Give your clothes, and your iron, a break. Propane clothes dryers are gentler on clothing, because they deliver warm air that has more moisture than electric models. You'll notice fewer wrinkles in clothes — while the efficient performance of propane dries them faster.

PROPANE CAN DO THAT®

PROPANE APPLIANCES FOR THE HOME

If you're looking for a reliable way to power every part of your home, Propane Can Do That®. Homeowners across the country trust propane for more than just grilling. They use it for cooking, heating, water heating, clothes drying, fireplaces, and so much more. It could be right at home in your house, too.

DELUXE APPLIANCES FOR EVERY ROOM

Propane powers the high-end appliances on your wish list, plus a few others you might not expect.

IMPROVED COMFORT

Picture the most comfortable parts of your home. Propane appliances can make each of those areas even more comfortable — with reliably hot showers, cozy rooms, and a fireplace in the living room. You can count on propane to overdeliver on the comfort factor, no matter how you're using it.

MORE SAVINGS

Propane naturally performs more efficiently than other home energy sources, so you get peak performance year-round while spending less money.

CONTROL YOUR ENVIRONMENTAL IMPACT

Using propane appliances in your home helps reduce your carbon footprint better than other energy sources, including electricity. Part of what makes propane so much cleaner is that propane appliances are more energy efficient, so you're using less energy for what you need — which also saves on monthly energy costs. If you're trying to be mindful of your home's environmental impact, using propane appliances is a great first step.

STANDBY GENERATORS

Power outages happen. Adding a propane standby generator gives you peace of mind that your home can keep running as normal, no matter what. And unlike gasoline and diesel, propane doesn't degrade over time, making it an ideal standby fuel.

FURNACES AND BOILERS

Eliminate the cold pockets in your home with a propane-powered furnace or boiler. Propane powers a "warmer heat" — that is, it heats air to a higher temperature when it leaves the vent, so you get to your desired temperature sooner. And it all happens more efficiently than it would with an electric furnace.
